SCREW THREAD REPAIR SYSTEM - MADE IN U.S.A.

SERIES 676:

Coil-Sert™ has the simplest and most cost efficient way to repair stripped or damaged threads. Inserts quickly and permanently restore stripped, worn or damaged threads to their original size and condition. Works in any material: aluminum, magnesium, bronze, cast iron, etc. Suitable for new applications requiring stronger threads. Meets all military and industrial specifications.

Thread Repair Kits include : 1 H.S.S. Drill, 1 S.T.I. (Screw Thread Insert) Tap, 1 installation tool, a quantity of inserts, and complete instructions.

FASTENERS

SCREW THREAD REPAIR INSERTS

SERIES 697: STANDARD TYPE (FREE RUNNING)

STRIP FEED WHEELS available, please inquire.

Two types of stainless steel screw thread repair inserts are available: "Standard" and "Screw-Lok".

Standard inserts provide a smooth free running thread.

Screw-Lok inserts provide a self locking torque on the male member by a series of "chords" on one or more of the insert coils. They positively lock screws and bolts from loosening due to impact or vibration. Screw-Lok inserts are dyed red for identification.

Stainless steel thread repair inserts are available in different lengths:

Short (One times the diameter (1D) of the bolt or screw) for short thread engagement applications.

Medium (1-1/2 times the diameter (1-1/2D) of the bolt or screw) provides sufficient strength in most applications.

Long (Two times the diameter (2D) of the bolt or screw) provides higher strength in critical applications, (especially in magnesium).

NOTE: Inserts supplied in Master Thread Repair Kits and Sets are Standard type and medium length.

Also available in 2-1/2 and 3 times the diameter of the bolt or screw (2-1/2D) (3D).

COIL-SERT™ SCREW THREAD REPAIR INSERTS

SERIES 698: SCREW-LOK (INTERNAL LOCKING)

Two types of stainless steel screw thread repair inserts are available : "Standard" and "Screw-Lok".

Standard inserts provide a smooth free running thread.

Screw-Lok inserts provide a self locking torque on the male member by a series of "chords" on one or more of the insert coils. They positively lock screws and bolts from loosening due to impact or vibration. Screw-Lok inserts are dyed red for identification.

NOTE : Inserts supplied in Master Thread Repair Kits and Sets are Standard type and medium length.

Stainless steel thread repair inserts are available in different lengths:

Short (One times the diameter (1D) of the bolt or screw) for short thread engagement applications.

Medium (1-1/2 times the diameter (1-1/2D) of the bolt or screw) provides sufficient strength in most applications.

Long (Two times the diameter (2D) of the bolt or screw) provides higher strength in critical applications, (especially in magnesium).

Also available in 2-1/2 and 3 times the diameter of the bolt or screw (2-1/2D) (3D).

STRIP FEED WHEELS available, please inquire.

SCREW THREAD REPAIR INSERTS

SERIES 698: SCREW-LOK (INTERNAL LOCKING) - FINE THREAD

Stainless steel thread repair inserts are available in different lengths:

Short (One times the diameter (1D) of the bolt or screw) for short thread engagement applications.

Medium (1-1/2 times the diameter (1-1/2D) of the bolt or screw) provides sufficient strength in most applications.

STRIP FEED WHEELS available, please inquire.

Long (Two times the diameter (2D) of the bolt or screw) provides higher strength in critical applications, (especially in magnesium).

Also available in 2-1/2 and 3 times the diameter of the bolt or screw (2-1/2D) (3D).

FASTENERS

COIL-SERT™ inserts are supplied in coarse and fine threads. Type 2, Type 4 and Type 6 tooling are used for finer pitch inserts, which are larger in the free state than the coarse pitch inserts. They have to be “pre-wound” to a smaller diameter for installation. Type 1, Type 3 and Type 5 tooling (threaded mandrel) is used for coarse pitch inserts.

Type 6 - Installation Tool (Threaded Mandrel with Prewinder)

INCH SERIES

Tang Break-off Tool

This tool is used to remove the driving tang of Coil-Sert™ inserts after they have been installed to eliminate their interference with the end of the assembled bolt. The operation of the tool is automatic, having a spring loaded punch that strikes a sharp blow against the tang of the installed insert.

For larger size inserts use standard needle nose pliers to remove tangs.

Extracting Tool
This tool is used to remove Coil-Sert™ inserts. Apply the tool to the insert, striking the head of the tool lightly turning it counter clockwise, maintaining steady downward pressure.
